

## Introducing the France Medical E>O75 for hair removal

The Program E>O device, also called E>O75, is a unique IPL hair removal device designed for the treatment of blond, brown and dark hair colour on skin phototype I (fair) to V (dark).

The E>O75 IPL device has been designed to be used on the whole body including face, bikini lines, brazilian, mankini, etc... The Program E>O is designed and developed for skin clinics and beauty salons.

### Treatment Protocol

After the 6th to 8th session, completed over 6 to 8 weeks, only one or two touch ups a year for maintenance will be necessary.

### Post-treatment

Client will have to wear a +30 SPF sunscreen protection to protect the skin from the sun during and 3 weeks after the treatment protocol.

### Results

There are obvious results after the first treatment. The hair will fall out progressively 7 to 21 days after each session.

### Contra-indications

- Pregnant women.
- People with diabetes.
- Very dark / black skin (Skin phototype VI).
- Grey / red hair (not efficient on this hair type due to the poor amount of melanin in it).
- Damaged, infected, burnt skin.
- Skin with recent sunburn (Wait a month for recovery).
- Unusual skin lesion (Needs medical advice).
- Tattoo (Can't treat over a tattoo).
- Skin disease (acne, psoriasis, eczema...).
- Photosensitive medications.
- Cutaneous pathology history
